Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Notification of this examiner's amendment was made by telephone to Frank Delucia on 12 December 2005. The amendment corrects an otherwise non-statutory claim directed to a computer program per se.

In claim 23:

On line 1, after "program" inserted ---embodied on a computer readable medium---

Should applicant desire other amendments, applicant may contact the Examiner for action or may file an amendment under 37 CFR 1.312 as indicated above.

Examiner's Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Referring to claims 1-4 and 7-23, the prior art searched and of record neither anticipates nor suggests in the claimed combinations, a halftoning technique including adding a proportion of the error at the current pixel to neighborhood error values at as yet unprocessed pixels of a subsequent scanline in accordance with a next scanline

error impulse response, where the next scanline error impulse response approximates a function which spreads with self-convolution in proportion to a degree of self-convolution.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited Art

The art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fan (US 5521989 A) provides a digital halftoning system, which uses error diffusion that eliminates "worm" artifacts introduced by standard non-symmetric error diffusion techniques. The error diffusion technique eliminates visible correlated patterns or artifacts by propagating digital halftoning quantization error in a balanced manner. This is achieved by error being distributed in a balanced or space reversed manner on subsequent scanlines by using a forward and a backward pixel pass.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott A Rogers whose telephone number is 571-272-7467. The examiner can normally be reached Monday through Friday 6:00am-2:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kimberly Williams can be reached at 571-272-7471.
